

# Boss

## FORAGE OATS

### KEY FEATURES

- ✓ Boss is a high production forage oat suited to most soil types and can withstand warmer soil temperatures
- ✓ Responds best to more frequent light grazing rather than severe defoliations early in the growing period
- ✓ High palatability and forage/hay quality are two strong points for this variety
- ✓ Ideal in dryland regions from 400mm plus through to irrigation
- ✓ Early vigour and quick recovery after grazing
- ✓ Boss has produced excellent results for hay producers and graziers over similar maturity varieties

### PERFORMANCE

Boss is a high tillering oat and can withstand warmer soil plantings. Boss can produce high dry matter production after second and third grazings. Ideal hay or early plant grazing oat.

### AGRONOMY, DISEASE RESISTANCE AND TOLERANCE

Boss has demonstrated a satisfactory level of resistance to leaf rust in a wide variety of commercial dryland and irrigated situations.

### MATURITY

Boss is a medium maturity variety that fits into a program as a great companion to Graza 53 and Graza 85.

### SEED AVAILABILITY

Available through all national rural resellers.
